230601 - SIGPRO - Signal Processing

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 739 - TSC - Department of Signal Theory and Communications
Academic year: 2019
Degree: MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Teaching unit Optional)
ECTS credits: 5  Teaching languages: English

Teaching staff
Coordinator: Climent Nadeu
Others: Meritxell Lamarca

Opening hours
Timetable: Tuesday and Thursday from 10:00 to 13:00

Prior skills
Advanced knowledge of Signals, Systems, and Transforms
Basic knowledge of Probability, Random Variables and Stochastic processes

Requirements
Two courses of the area Signals, Systems, and Transforms
At least one course about Probability, Random Variables and Stochastic Processes

Degree competences to which the subject contributes

Specific:
1. Ability to process continuous variable signals using digital techniques.
2. Ability to characterize deterministic and random signals in time or space, and in the frequency domain.
3. Ability to analyze, model, identify and simulate linear systems, especially digital filters and adaptive systems.
4. Ability to apply information theory methods, adaptive modulation and channel coding, as well as advanced techniques of digital signal processing to communication and audiovisual systems.

Transversal:
5. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.
6. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.
230601 - SIGPRO - Signal Processing

Teaching methodology

- Lectures
- Exercises and applications
- Laboratory work (three 2-hour sessions)
- Individual work and team work
- Assignments
- Short and extended answer tests (Partial and Final Exams)

Learning objectives of the subject

Learning objectives of the subject:

Understanding the concepts and techniques of the field of statistical signal processing, and their application to problems arising from real applications.

Learning results of the subject:

Given several application contexts from multimedia and communications, the students develop their ability to digitally process, with linear systems and transforms, signals from those applications which are modelled as stochastic processes.

| Description:                                                           |                | - Introduction and applications  
- Discrete-time signal processing  
- Random variables and sequences                                          |
| 2. Basic estimation theory                                            | 14h            | Theory classes: 3h, Laboratory classes: 2h, Self study: 9h               |
| Description:                                                           |                | - Principles of estimation theory  
- ML and MAP estimation                                                     |
| 3. Nonparametric spectrum estimation                                   | 27h            | Theory classes: 7h, Laboratory classes: 2h, Self study: 18h            |
| Description:                                                           |                | - Periodogram and autocorrelation estimates  
- Smoothing the periodogram. Applications                                    |
| 4. Signal modeling and parametric spectral estimation                 | 20h            | Theory classes: 4h, Laboratory classes: 2h, Self study: 14h            |
| Description:                                                           |                | - Linear models of random processes  
- AR-based spectral estimation. Applications                                |
5. Wiener filtering

**Description:**
- Optimal linear filters and predictors
- Adaptive filters. LMS algorithm.
- Applications

**Learning time:** 30h
- Theory classes: 8h
- Laboratory classes: 2h
- Self study: 20h

---

**Qualification system**

Final exam: 40%
Partial exams: 30%
Laboratory work: 20%
Assignments: 10%

**Bibliography**

**Basic:**

**Complementary:**

**Others resources:**
Teacher's material: notes, problem sets, laboratory guides
