230607 - SBMIC - Systems Based on Microprocessors

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 710 - EEL - Department of Electronic Engineering
Academic year: 2020
Degree: MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Teaching unit Optional)
MASTER'S DEGREE IN ELECTRONIC ENGINEERING (Syllabus 2013). (Teaching unit Optional)
MASTER'S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019). (Teaching unit Optional)
ECTS credits: 5
Teaching languages: English

Teaching staff

Coordinator: JORDI SALAZAR
Others: MANEL DOMÍNGUEZ, VICENTE JIMÉNEZ

Degree competences to which the subject contributes

Specific:
1. Ability to use programmable logical devices, as well as to design analog and digital advanced electronics systems. Ability to design communication devices, such as routers, switches, hubs, transmitters and receivers in different bands.
2. Ability to develop electronic instrumentation, as well as transducers, actuators and sensors.

Transversal:
3. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
4. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

Teaching methodology

- Lectures
- Application classes
- Laboratory classes
- Individual work (distance)
- Exercises
- Other activities
- Short answer test (Control)
- Extended answer test (Final Exam)

Learning objectives of the subject

Learning objectives of the subject:

The aim of this course is to provide students with an understanding of microprocessor-based systems and their use in instrumentation, control and communication systems. Topics covered in the course include, microprocessor architecture and organization, bus architectures, memory and I/O subsystems, timing and interfacing, peripheral controllers and programming in the 'C' language.
230607 - SBMIC - Systems Based on Microprocessors

Learning results of the subject:

- To know how microprocessor based systems can be applied.
- To understand the architecture and operation of a microprocessor system.
- To be able to use a microprocessor development system to prepare and run a program.
- To be able to implement microprocessor-based systems, including both hardware and software, using a specific microprocessor or microcontroller.

**Description:**
Development process, Integrated development environment, Testing and debugging tools, RTOS

### Planning of activities

#### LABORATORY

**Description:**
Continuous assessment of laboratory exercises to develop along the course.

#### EXERCISES

**Description:**
Exercises to strengthen the theoretical knowledge.

#### SHORT ANSWER TEST (CONTROL)

**Description:**
Mid term control.

#### EXTENDED ANSWER TEST (FINAL EXAMINATION)

**Description:**
Final examination.

### Qualification system

Final examination: 60%
Mid-term exam: 15%
Laboratory assessments: 25%
