230631 - OFT - Optical Fiber Telecommunications

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 739 - TSC - Department of Signal Theory and Communications
Academic year: 2020
Degree: MASTER'S DEGREE IN ELECTRONIC ENGINEERING (Syllabus 2013). (Teaching unit Optional)
MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Teaching unit Optional)
MASTER'S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019). (Teaching unit Optional)
ECTS credits: 5
Teaching languages: English

Teaching staff
Coordinator: Comellas Colomé, Jaume
Others: Jaume Comellas Colomé
Joan M, Gené Bernaus

Opening hours
Timetable: Any time is possible by appointment email

Degree competences to which the subject contributes

Specific:
3. Ability to implement wired/wireless systems, in both fix and mobile communication environments.

4. Ability to design and dimension transport, broadcast and distribution networks for multimedia signals

Transversal:
1. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
2. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

Teaching methodology

Lectures (3h/week)
Group work or Individual work : Technical Report
Oral presentations of Technical Reports
Other activities
Extended answer test (Final Exam)

Learning objectives of the subject

The objective of this course is to train students in the methods of study, analysis, design and evaluation of optical fiber communication technologies.
First, we will analyze the great evolution in the main technologies related to fiber optics, and key devices to build transmission systems.
Next, we will analyze and evaluate the optical switching technologies of the transport plane of Automatically Switched...
230631 - OFT - Optical Fiber Telecommunications

Optical Networks (ASON), and the main optical fiber transmission technologies that currently allow the implementation of IP-DWDM transport networks, as well as its likely future evolution. We also briefly discuss the important contribution that fiber optic transmission technology will have on the future evolution of radio access networks (Fronthaul) for the future 5G mobile technology.

Learning results of the subject:
- Ability to analyse, specify, design networks, services, processes and applications of telecommunications in local or long distance, with different bandwidths in IP over fiber optical networks.
- Ability to apply engineering tools as planning tools, dimensioning and optical network analysis.
- Ability to analyse, model and implement new architectures, network protocols and communication interfaces, and new services and applications in optical networks.

### 1. Evolution of Optical Fiber Telecommunication Technology.  

**Description:**
- Evolution of optical fibers.
- Evolution of transmission systems with optical channel multiplexing.
- Evolution of optical spectral efficiency of transmission systems.
- Evolution of optical switching and signal processing.
- Evolution to new markets:
  - "The new cloud era with Data Centers".
  - Fiber Optic Infrastructure for 5G Mobile.
  - Fiber Optic Technology for Smart Cities.

**Learning time:** 10h  
Theory classes: 4h  
Self study: 6h

### 2. Key devices for optical fiber transmission systems.  

**Description:**
- Optical fibers: types, characteristics and performances.
- Fiber optic propagation:
  - Dispersions.
  - Non linear effects.
- Optical multiplexers and demultiplexers.
- Optical amplifiers:
  - Erbium Doped Fiber optic Amplifier (EDFA).
  - RAMAN: distributed optical amplifier.

**Learning time:** 16h 30m  
Theory classes: 9h  
Self study: 7h 30m

### 3. Fiber Optic Transmission Systems.  

**Description:**
- Modulation of Intensity and Direct Detection.
- Coherent Systems with Heterodyne Detection.
- Advanced Modulation Formats.
- Dense Wavelength Division Multiplexing (DWDM).
- Coarse Wavelength Division Multiplexing (CWDM).
- Optical transceivers and transponders.

**Learning time:** 23h 30m  
Theory classes: 10h 30m  
Self study: 13h
### 4. Optical switching.

**Learning time:** 18h  
Theory classes: 8h  
Self study: 10h

**Description:**  
Optical switches.  
Optical Add Drop Multiplexer (OADM).  
Reconfigurable OADM (ROADM).  
Multi-degree ROADM.

### 5. IP Transport in Optical Networks.

**Learning time:** 19h  
Theory classes: 8h  
Self study: 11h

**Description:**  
OTN technology.  
Forward Error Control (FEC) technologies.  
IP transmission based on technologies: Ethernet + OTN + FEC + DWDM with tunable laser + Optical amplifiers + M-ROADM + Control Plane.  
Automatically Switched Optical Networks (ASON).  
Metro and Core Networks.  
Future evolution:  
• Elastic Technologies with FlexGrid-WDM.  
• Transponders for high speeds = 400Gbps.  
• New modulation technologies: OFDM and Nyquist.  
• Superchannels with optical multicarriers for transmissions at terabits.  
• Spatial multiplexing (SDM) with multi-core fibers.  
• Modal multiplexing with Few-Mode Fibers (FMF).  
• Software Defined Networking and Network Functions Virtualization.

### 6. Fiber Optic Infrastructures to implement 5G Mobile

**Learning time:** 13h 40m  
Theory classes: 5h 40m  
Self study: 8h

**Description:**  
Fiber optic technologies for Radio Access Networks (RAN): The path to 5G requires a strong optical network.  
Transport CPRI over: Ethernet or OTN Mapping.  
C-RAN: Fronthaul and Backhaul Networks.
### Planning of activities

| TECHNICAL REPORT | Hours: 29h  
Self study: 29h |
|------------------|----------------|
| **Description:**  | Technical Report: This activity involves the preparation of a Technical Work, individual or in group of 2 students, which must be delivered in PowerPoint format and presented to the class at the end of the course.  
Oral Presentation: Oral presentation of Technical Report (30 minutes)  
Final exam (90 minutes) |
| **Support materials:**  | For this course ATENEA will be the virtual teaching support tool. From ATENEA the students will be able to download all the documents (slides, papers, pdfs, etc.) related to the course. |
| **Descriptions of the assignments due and their relation to the assessment:**  | Technical Report: 1 week before the end of course |
| **Specific objectives:**  | Evaluate technical research carried out individually or in groups on a topic related to the course. |

| ORAL PRESENTATION | Hours: 0h 45m  
Laboratory classes: 0h 45m |

### Qualification system

- Final examination: 40%
- Individual assessment: 10%
- Group assessments: 50% (*Technical Report*: work-technical report on a topic related to the subject)

### Regulations for carrying out activities

On the final exam students will be able to bring all kinds of technical information (presentations-slides, books, related papers of the course, etc.)
