230657 - CTA - Control Theory and Applications

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 710 - EEL - Department of Electronic Engineering
Academic year: 2019
Degree: MASTER'S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019).
(Teaching unit Optional)
MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Teaching unit Optional)
MASTER'S DEGREE IN ELECTRONIC ENGINEERING (Syllabus 2013). (Teaching unit Optional)
ECTS credits: 5
Teaching languages: English

Teaching staff
Coordinator: DOMINGO BIEL, FRANCESC GUINJOAN
Others: ALBERTO POVEDA, EDUARD ALARCÓN

Degree competences to which the subject contributes

Transversal:
1. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
2. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

Teaching methodology

- Lectures
- Laboratory classes
- Exercises
- Other activities
- Extended answer test (Final Exam)

Learning objectives of the subject

Learning objectives of the subject:

The aim of this course is to introduce the students in time-domain and frequency-domain methods used to analyse and design linear control systems in both continuous and discrete-time fields.

Learning results of the subject:

- Ability to understand the basic concepts related to feedback system in both continuous-time and discrete-time fields.
- Ability to apply the root locus technique and the Routh stability criteria for the analysis of control systems.
- Ability to design the proper controllers to verify some control specifications in both time-domain and frequency domain.

## Content

### 1. Introduction to linear control systems

**Learning time:** 10h  
Theory classes: 2h  
Self study: 8h

**Description:**  
- Basic components of a control system, reference, control, output and disturbance signals.  
- Control system goals.  
- Continuous-time control and discrete-time control.  
- Dynamic systems classification: linear and nonlinear systems, time-varying and time-invariant systems.  
- Transfer function of linear systems.

### 2. Continuous-time control systems analysis

**Learning time:** 24h  
Theory classes: 6h  
Self study: 18h

**Description:**  
- Transient and steady-state time-response of linear systems.  
- First and second-order systems.  
- Transient response characterization: settling time, maximum overshoot, etc.  
- Higher order systems: transient response approximation through dominant poles and zero-pole cancellation.  
- Routh-Hurtwitz stability criteria.  
- Root locus analysis.  
- Steady-state error.

### 3. Continuous-time control systems design

**Learning time:** 28h  
Theory classes: 6h  
Laboratory classes: 6h  
Self study: 16h

**Description:**  
- Control design through root locus.  
- First and second-order controllers.  
- PID controllers.  
- Implementation issues of PID controllers.
### 4. Analysis of control systems in frequency domain

**Learning time:** 9h  
Theory classes: 3h  
Self study: 6h

**Description:**  
- Frequency response of linear systems.  
- Nyquist diagram and Bode diagram.  
- Relative stability: gain margin and phase margin.

### 5. Frequency-domain control design

**Learning time:** 24h  
Theory classes: 5h  
Laboratory classes: 2h  
Self study: 17h

**Description:**  
- Frequency-domain specifications: relative stability margins and bandwidth of a control system.  
- Lead-lag and phase-lag compensations.

### 6. Discrete-time control systems

**Learning time:** 30h  
Theory classes: 4h  
Laboratory classes: 5h  
Self study: 21h

**Description:**  
- Introduction to discrete-time control systems.  
- The Z transform.  
- Z Plane analysis of discrete-time systems.  
- Design of discrete-time control systems by conventional methods.
