230698 - OPNET - Optical Networks

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 739 - TSC - Department of Signal Theory and Communications
Academic year: 2020
Degree: MASTER’S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019). (Teaching unit Optional)
MASTER’S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Teaching unit Optional)
ECTS credits: 5  Teaching languages: English

Teaching staff
Coordinator: Comellas Colome, Jaume
Others: Junyent Giralt, Gabriel
        Spadaro, Salvatore

Prior skills
Fiber optic communications fundamentals.
Computer networks fundamentals.

Degree competences to which the subject contributes

Specific:
CE4. Ability to design and dimension transport, broadcast and distribution networks for multimedia signals
CE3. Ability to implement wired/wireless systems, in both fix and mobile communication environments.
CE6. Ability to model, design, implement, manage, operate, administrate and maintain networks, services and contents
CE8. Ability to understand and to know how to apply the functioning and organization of the Internet, new generation Internet technologies and protocols, component models, middleware and services
CE7. Ability to plan networks and decision-making about services and applications taking into account: quality of service, operational and direct costs, implementation plan, supervision, security processes, scalability and maintenance. Ability to manage and assure the quality during the development process

Transversal:
CT5. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.
CT4. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.

Teaching methodology
Lectures, application classes, workgroup assignments, individual assignments

Learning objectives of the subject
The aim of this course is to give insight of modern techniques used in broadband optical communications networks. Main concepts about key devices involved, traffic engineering, control and management of optical networks, as well as resiliency, will be given considering both, backbone and access networks.

**Study load**

| Control and Management of Optical Networks | Learning time: 13h  
Theory classes: 5h  
Self study: 8h |
|------------------------------------------|----------------------------------|
| **Description:**  
ASON fundamentals. GMPLS controlled networks.  
**Specific objectives:**  
Main characteristics of optical networks management. |

| Metro and Access Optical Networks | Learning time: 15h  
Theory classes: 5h  
Self study: 10h |
|---------------------------------|----------------------------------|
| **Description:**  
Passive optical networks  
Access networks evolution  
**Specific objectives:**  
Access networks characteristics. |

| Packet Switched Optical Networks | Learning time: 11h  
Theory classes: 3h  
Self study: 8h |
|---------------------------------|----------------------------------|
| **Description:**  
Optical Packet and Burst Switching Technologies  
**Specific objectives:**  
Understanding OPS characteristics and technological requirements |

| Energy efficiency in Optical networks | Learning time: 11h  
Theory classes: 3h  
Self study: 8h |
|--------------------------------------|----------------------------------|
| **Description:**  
Networks energy consumption. Green optical networks |
## Elastic/ flexgrid optical networks

**Description:**
Elastic network characteristics and Performance evaluation

**Learning time:** 13h
- Theory classes: 5h
- Self study: 8h

## Software Defined Networks (SDN)

**Description:**
Software defined networks principles. Optical Network Virtualization

**Learning time:** 11h
- Theory classes: 3h
- Self study: 8h

## Optical Networks and data centres

**Description:**
Cloud computing and traffic evolution. Optics in the data center

**Learning time:** 12h
- Theory classes: 4h
- Self study: 8h

### Qualification system

Lectures attendance (10%), Workgroup assignments (20%), Individual work (30%), Exam (40%)

### Bibliography

**Complementary:**
